

THE ZERO VIZ SOLUTION

Whether it's performing a repair, searching for evidence, or recovering a wreck, zero visibility conditions can hamper productivity and safety.

Darkwater Vision systems use infrared light to penetrate turbid waters and create a high-resolution video feed which is shown on the Hammerhead display. By using infrared and our custom technology, the Darkwater Vision systems can see things that human eyes cannot.

This system is ideal for applications such as:

- SEARCH & RECOVERY
- EVIDENCE RECOVERY
- UNDERWATER CONSTRUCTION
- UNDERWATER INSPECTION
- SHIP HUSBANDRY
- OIL RIG INSPECTION
- TREASURE HUNTING
- ARCHAEOLOGICAL RESEARCH
